2 Corinthians 4:16-18 *So we do not lose heart .Though our outer self is wasting away, our inner self is being renewed day by day. For this light momentary affliction i preparing us for an eternal weight of glory beyond all comparison, as we look not to the things that are seen but to the things that are unseen.*

3 Easy Ways to Check Your Website's Mobile Responsiveness

In today's world of smartphones, tablets, and laptops it's more important than ever to have a website that is completely mobile responsive. 52% of all website traffic is generated on a mobile device, and 61% of consumers say they are more likely to purchase from mobile friendly sites. Ensuring that your website is mobile responsive can make the biggest difference when it comes to your user's experience.

Let us show you how!

Make Sure Your Website is Ready for Any Device

Mobile responsive means that your website is designed in a way that certain elements such as imagery and text will adjust based on the device that is being used. Here are three website tools we recommend to check the mobile responsiveness of your website:

Browser Stack

Browser Stack is one of our favorite tools to use! It allows you to toggle through tons of various devices to actually see what your website page will look like on an specific device. Browser Stack does require you to set up a free account with them in order to utilize their mobile testing, but it's super easy and simple -- just input the URL that you want to analyze and let Browser Stack to the rest!

Check out Browser Stack

Responsive Design Checker

Responsive Design Checker is another simple tool to see your individual URLs in all of your desktop, laptop, tablet, and mobile options. The great thing about Responsive Design Checker is that you can also put in any customer width or height size to see what your page would look like on any sized device -- even if it's not a standard size!

Try out Responsive Design Checker

Test Within Your Own Website Editor

If you use a simple drag and drop editor for your website (Elementor, for example) then there is a simple way to check your mobile responsiveness. In the bottom left hand corner, you can adjust your view between a desktop, tablet, and a mobile device. Check into whatever website provider you use to see what options they offer!

Optimize Your Website for Mobile Responsiveness

What are Conversion Rates and What do they Mean?

In the world of marketing, many professionals throw around loads of technical terms that might not mean a whole lot to the rest of the world. Click through rate, impressions, organic distribution, conversion rates, and more… Maybe we will have time another day to write down some information for you on the rest of those terms, but for today, let's focus on conversion rates, what are conversion rates? How do they affect your sales? What makes a high conversion rate good? Where do they connect to your marketing?
